

Aggregator-neutral records & LCRI 12.7B4.2: Electronic Serials That Don't Retain Earlier Titles

RI

If an electronic serial is reformatted so that all evidence of the earlier title is removed, give the earlier title in a note. Give a note explaining that the earlier title no longer appears in the serial. *Also give such a note if an aggregator presents a range of issues and does not retain the earlier titles.*

Example of a title change for which two providers present a range of issues and do not retain the earlier title, and another provider presents both titles.

New title: Journal of the Royal Statistical Society: Series B (Statistical Methodology)

Old title: Journal of the Royal Statistical Society: Series B (Methodological)

Title changed with Vol. 60, pt. 1 (1998).

Blackwell and Ingenta list issues for 1997--issues of old title—on page with new title.

The screenshot shows a web browser window with the address bar displaying <http://www.blackwell-synergy.com>. The page title is "List of Issues" for the "Journal of the Royal Statistical Society: Series B (Statistical Methodology)". The page includes a search bar, a "Go" button, and a "Further Search Options" section with "Simple", "Advanced", and "Saved" tabs. A "Quicklink" section shows a dropdown menu for "J Royal Statistical Soc B" and input fields for "Vol:", "Issue:", and "Page:". The main content area features a cover image of the journal, a "Go to:" dropdown menu set to "Sample Issue", and a "Go" button. Below the cover image, there are links to "Sign-up for FREE email table of contents alerts**" and "Add this journal to your favorites**". A green circle indicates "You have full access rights to this content". The page also lists other journals from the Royal Statistical Society: Series A (Statistics in Society), Series C (Applied Statistics), and Series D (The Statistician). A note states: "Due to possible problems with the display of mathematical symbols in HTML articles, the PDF file should be used as the definitive version of each article in this journal." The "List of Issues" section shows a list of issues from 1997 to 2004. A white arrow points to the 1997 issue entry: "1997 59(1) - 59(4)".

J. R. Statist. Soc. B (1997)
59, No. 1, pp. 1-2

Report of the Editors — 1996

The past year has seen considerable change to the Editorial Panel of Series B ('the *Journal*'). Frank Critchley, Trevor Sweeting and Byron Jones came to the end of their period as Associate Editors. Also, during the year Tom DiCiccio, Neil Shephard and David Draper retired from the Editorial Panel. New Associate Editors are Martin Crowder (University of Surrey), Angela Dean (Ohio State University, currently visiting the University of Southampton), Nils Hjort (University of Oslo), Ian Jolliffe (University of Aberdeen) and Sylvia Richardson (Institut National de la Santé et de la Recherche Médicale, Paris). In addition, Charles Taylor has agreed to continue as a member of the Panel beyond his original 4-year term. All the changes leave a genuinely international Editorial Panel of 16 Associate Editors, and the two Joint Editors. We are grateful to everyone involved in the editorial process for their substantial commitment to the *Journal*.

The *Journal* continues to flourish. In our last report we noted a marked increase in the submission rate over that in the previous few years. We are pleased that this healthy state of affairs has been maintained in the last year. In the period from September 1995 to August 1996 220 papers were submitted. The current (September 1996) status of these papers is as follows: accepted, 1%; rejected, 60%; invited revision, 4%; deferred decision, 3%; still awaiting referee reports, 32%. The corresponding status of the 224 papers submitted in the period September 1994 to August 1995 is as follows: accepted, 13%; rejected, 75%; invited revision, 6%;

The cataloger cannot see the old title on a pdf image so the old title has truly disappeared as opposed to being buried.

JSTOR lists both old and new title separately.

Questions

Given the previous example, does using an integrated entry cataloging convention for the disappearing title (as in the LCRI Asian Age example, MARC 247/547) conflict with the CONSER aggregator-neutral approach?

If so, how can this conflict be resolved?

Some scenarios to consider:

- Cataloger may know of or have access to multiple versions, some presented successively, some presented in 'latest entry' fashion.
- Cataloger may only have access to 'latest entry' version, but knows (based on print records) that there was an earlier title whose content appears on the version they're viewing.
- Cataloger may only have access to 'latest entry' version with no reference to any other versions.
- There may be existing non-authenticated records in OCLC describing earlier or later titles as represented in aggregator databases.

One possible practice would be to limit the use of LCRI 12.7B4.2 to those cases where there is no evidence of a tangible version. This more aggregator-neutral practice of keeping the print and online version consistent could lead to the following guidelines:

1) If cataloger has access to multiple providers, the cataloger should prefer the successively presented version as the basis of description (even if it's a less-preferred version) and note in 246, 580 or 856 \$z that some providers list issues under the later title.

2) If the cataloger only has access to a 'latest-entry' presentation but has successive entry print or aggregator records:

A) Create successive online version records using the successive record as the basis of description and note in 246, 580 or 856 \$z and note that some providers list issues under the later title.

or alternatively,

B) Create a single record for the 'latest-entry' online version and note in 246, 580 or 856 \$z that some providers list issues of the earlier title under the later title (with the understanding that if a later cataloger identifies a successive presentation that they would create a record for the earlier title and redescribe the later title).

3) If the cataloger has access to an online serial that appears to have a disappearing title with no evidence of earlier title (other than existing

online version serial record), then cataloger should follow current LCRI
(meaning redescribe and use 247/547 to describe earlier iteration)

Other ideas or thoughts??
